

San Diego Electroglide -- August 1 September 2007

Seven of us showed up for this months Electroglide. The weather was San Diego at its finest, but there was not a tremendous amount of Lift. Bob Anson had the longest flight of the day at 8 minutes 42 seconds. The highlight of the event was the Team of Jeff and Marshal Struthers winning with an Easy Star. So, you don't need a high-tech carbon fiber "whatever" to win this thing. Marshal is 13 years old; Jeff is his grandfather.

Each month more contestants are turning to the required 28x16 outrunner and 2-cell Lipos, and the 45 second motor run gets the whole field to near-out-of-sight status. Stelio is making a special page for the Electroglide on our web site. Rules and regulations will be posted as well as the monthly report.

Again, I ask all Club members as well as visitors to come out and give the Electroglide a try. All you need is membership in the AMA to join us. It's economical, it's quick, and I guarantee it will improve your piloting skills.

The next Electroglide will be September 29th. First toss 9:30 am.
