

San Diego Electroglide

15 November 2008

I have decided to list all of the competitors according to their total scores regardless of their adherence to the "rules" of the Electroglide. I still have hopes that everyone will gradually move toward adherence, eventually, because this puts us all on a "level playing field" (at least as far as the power to get our ships up to as high as we can keep them in sight).

I don't think that we will ever have a way to equalize such things as eyesight, but keep moving toward the "rules": {28x16mm outrunner and 2 cell lipo or 7 cell Nimh or Nicad} and enjoy the fun of our little competition.

The next one is December 20th. First toss at 9:30!

Don

PS In order to give more credit for spot landings, I'm listing the spot landing points earned, in parentheses, following the score for each flight.

PPS. Chuck Grim has a friend with an "Organic" for sale -- a motor glider well suited for Electroglide competition. Jot him an e-mail for further info.
